# e Coach **VCS**

The **eCoach VCS** (Voice Communication System) Simulator has an IP-based design. It operates like an ordinary VCS, but in addition it has functions to increase simulation realism. The eCoach VCS can be delivered as part of a complete eCoach simulation solution or as a stand-alone system. The VCS working position can be configured with multiple headsets e.g. headsets for student controller, instructor and an observer.

*e*Coach **VCS**

eCoach VCS (Voice Communication System) Simulator

· The switch is the main component of the system and contains the switching software running on a server
· The workstations (clients) communicate with the server by use of IP-communication
· The VCS Client:
  - Runs on a client PC with a touch input device (TID) for display and user input
  - The G/G-part permits a user to make and receive telephone calls (PSTN), Direct Access (DA) and Instantaneous Access (IA) calls
  - The A/G-part permits a user to select frequencies for either monitoring or transmission, or both
  - The fonts, colors, and background of the display are user configurable
  - The current exercise time is displayed on the display
  - Frequencies, phone numbers, roles, etc. are configurable
· Recording and playback of voice
· Can be delivered as a stand-alone system or as part of other eCoach simulators
